

Brian Wheatman

267-217-3457

wheatman@mit.edu

EDUCATION

Massachusetts Institute of Technology (MIT)

Master of Engineering in Computer Science and Engineering

Concentration in Systems

GPA: 5.0/5

Cambridge, MA

June 2019

Massachusetts Institute of Technology (MIT)

Bachelor of Science in Computer Science and Engineering

Bachelor of Science in Mathematics

Minor in Economics

Minor in Management Science

GPA: 4.7/5

Cambridge, MA

June 2017

RESEARCH EXPERIENCE

MIT Computer Science and Artificial Intelligence Laboratory (CSAIL)

Master of Engineering Thesis with Prof. Charles Leiserson in Performance Computing

Cambridge, MA

Sep 2017 - Jun 2019

- Improved an image processing pipeline containing petabytes of images with approximate locations to create a single, large mosaic with accurate locations
- Decreased time and resource requirements, allowing the pipeline to run on a single machine, instead of a cluster

MIT Computer Science and Artificial Intelligence Laboratory (CSAIL)

SuperUROP Researcher with Prof. Daniela Rus and Prof. Sertac Karaman

Cambridge, MA

Sep 2016 - Jun 2017

- Designed and implemented a new, online algorithm for a NP-Hard variant of the Traveling Salesperson Problem, which enables solutions to be found ten times faster than the current approach

MIT Human Dynamics Laboratory at MIT Media Laboratory

Undergraduate Researcher with Prof. Alex (Sandy) Pentland

Cambridge, MA

Sep 2015 - Jun 2016

- Modeled energy use given data from mobile phone records using machine learning, particularly clustering algorithms, to be used by the country of Andorra for predicting energy needs
- Created predictive models for population movement using mobile phone records
- Presented results at and was published in the conference proceedings for SBP-BRiMS 2016

MIT Sloan School of Management

Undergraduate Researcher with Prof. Stephen Graves

Cambridge, MA

Feb 2014 - Aug 2014

- Designed and developed a program for simulating a user-specified production line, including raw materials, intermediaries, finished goods, costs, and time constraints to be used as a visualization and teaching tool
- Created a graphical user interface to visualize and interact with the different parts of the simulation

TEACHING EXPERIENCE

Teaching Assistant for Computation Structures (6.004)

Spring and Fall 2018

- Teach an introduction to computer structures from combinational logic to parallel systems

Teaching Assistant for Seminar in Undergraduate Advanced Research (6.UAR)

Fall 2017

- Advise undergraduates and lead section to help prepare undergraduates for their senior projects

Lab Assistant for Introduction to Digital Communications (6.02)

Fall 2016

Tutor for Introduction to Algorithms (6.006)

Tutor for Design and Analysis of Algorithms (6.046)

Grader for Introduction to Algorithms (6.006) and Design and Analysis of Algorithms (6.046)

PROFESSIONAL EXPERIENCE

Google

Software Engineering Intern

Cambridge, MA

Summer 2018

- Worked on Akaros, a new operating system for high performance and real time applications
- Developed a port of the Go programming language to run on Akaros

Google

Software Engineering Intern

New York, NY

Summer 2017

- Enhanced a large, Map-Reduce data processing pipeline used to aggregate and report advertising data
- Created software cache for fast access to critical path metadata stored in slow storage

Five Rings Capital

Software Engineering Intern

New York, NY

January 2017

- Conducted an evaluation of different database solutions on the basis of cost, scalability and ease of use
- Reduced memory requirements for the cloud database by at least four times and of individual queries by orders of magnitude by structuring data, making the cloud database cheaper than a local one

Facebook

Data Engineering Intern

Menlo Park, CA

Summer 2016

- Created pipelines to collect and organize third party data to be used for business intelligence purposes
- Worked with multiple, large databases using several database engines, including Oracle and Hive
- Created self-documenting code that generates textual and visual aids to help understand the pipeline

JP Morgan Chase & Co.

Software Engineering Intern

New York, NY

Summer 2015

- Designed and implemented an automated testing process for a large, transaction system with nightly generated statistics and visualizations of performance (up to 10 million data points added daily)
- Enabled user interaction that provides enhanced graphical and statistical analysis of data
- Created a website with dynamically generated pages to display results of the tests and long term trends

AWARDS AND HONORS

- Lockheed Martin Undergraduate Research and Innovation Scholar
- Member of Eta Kappa Nu (Computer Science Honor Society)
- Member of Tau Beta Pi (Engineering Honor Society)
- Boy Scouts of America Eagle Scout
